1928 to 1929 BRIGGS MODELS 60-A,B,C

Variations are so often found in the spacing of roof bows on these Fordor Sedans that it is worth while to check each car before the headlining is made.

Please fill in the measurements from your car as indicated on the sketch below. Measurements may be taken through the cloth with sufficient accuracy, down the center of the headlining. The overall measurement gives us a second check. As we add extra material for tacking at each end it is not necessary for you to take this into consideration.

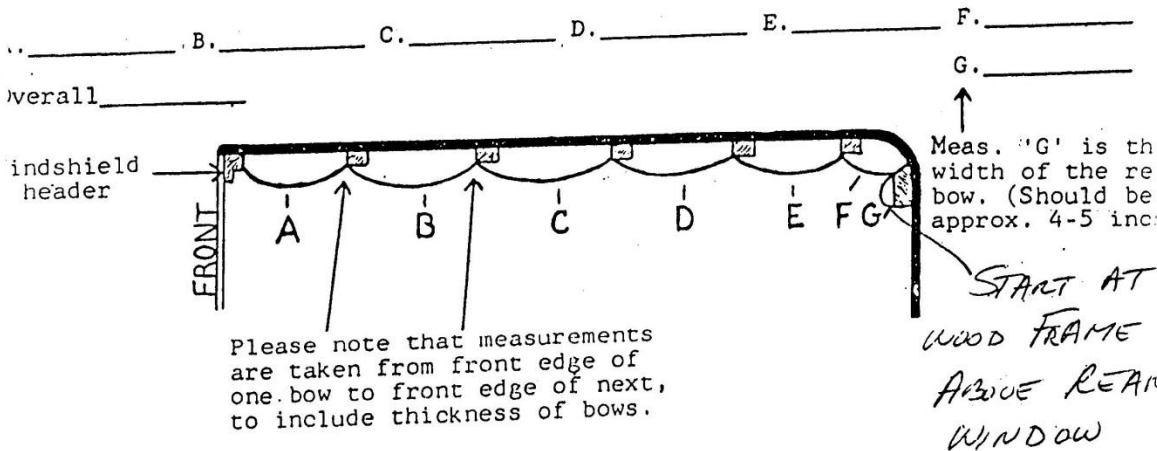

The diagram is a general one, covering several models, and may not correspond exactly to yours. If yours has fewer bows, cross out the extra space; if more, add between or make a new diagram.

Thank you for your co-operation.
